DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murayama. Murayama discloses a CVD deposition furnace having an input window and an output window for an X-ray analysis device. The device includes a source, monochromator, and detector, and the system determines a rocking curve (due to translation problems identified as a locking curb). Not disclosed is that the monochromator be a curved monochromator. It would have been obvious to one of ordinary skill in the art to use a curved monochromator in the device of Murayama motivated by the inherent benefits to increased focusing and thus usable X-rays.

Art Unit: 2882

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takahashi discloses a system similar to Murayama's.
